## PRO ARMOR® DUAL-THREAT

Engineered with dual-compound technology and radial construction to offer revolutionary off-road performance in all terrains. The lateral-grip compound on the outer edges of the tire has a softer durometer rubber for cornering performance and superior grip. The long-wearing compound in the middle of the tire has harder durometer rubber for increased traction during acceleration, straight line stability, and overall longer tread life.

# ALL-TERRAIN TRACTION

It's tough to make Sportsman® and Polaris ACE® even more versatile than they already are. But with a set of Prospector Pro® Tracks, you'll do just that. Tread through deep snow without concern.

Polaris®-specific gearing provides 1:1 ratio to:

- Minimize track slip, providing better climbing ability and improved traction in deep snow
- Improve top speed over prior models by approximately 5%
- Reduce operating RPM for a quieter ride
- Improve driveline durability, which allows vehicle to run at a lower RPM, decreasing engine wear

New front dual stabilizer for improved stability

Polaris® Exclusive optimized hub geometry that minimizes feedback and eases steering effort

Lightweight design provides for better flotation, eases steering effort, and provides better vehicle control

Flexible lug design provides the highest level of deep snow performance by lifting up in deep snow as opposed to digging down

## ENGINEERED TO MAXIMIZE THE LIFE OF YOUR RIDE

All Polaris® fluids—from AGL to Demand Drive Fluid—are developed for your vehicle. Trust the only fluids perfectly engineered for your needs.

## SPECIFIC NEEDS, SPECIFIC OILS

Polaris® invests millions in engine development, and part of that investment is making sure its lubricants—critical to engine performance—are the right formula for your specific engine. The amount of testing data and engineering resources used in developing Polaris® lubricants would overwhelm an aftermarket company. Therefore, the aftermarket must produce an oil to an industry-wide standard that must account for a variety of operating parameters.

PS-4 is designed specifically for Polaris® 4-cycle engines and has high film strength and wear protection under extreme loads and temperatures. Exclusive anti-wear additives protect engine parts with extra rust and corrosion protection.

Everything needed to change your oil! The correct filter & amount of oil for your vehicle.

# TIRE SEALANT

## HOW IT WORKS

Tire sealant remains liquefied inside your tire until a leak develops in the tire or wheel.

Once a leak occurs, the tire sealant rushes out of the tire and quickly creates a permanent solid plug.

The plug maintains the pressure of the tire so you can continue your ride.

### PREMIUM TIRE SEALANT

- Instantly seals and repairs rim, bead leaks, and punctures up to 1/4" on standard tires, and 3/4" on heavy ply tires
- Will not rust, corrode, or pit wheels
- Creates permanent repair
- Helps maintain air pressure for the life of the tire
- Remains fluid and effective in temperatures down to -45° F
- Helps seal the tire bead against the wheel
- Easily installed through existing tire valve stem with valve core removed
- 100% water soluble for easy cleanup

# FOR THE LIFE OF YOUR RIDE

THE KEY TO KEEPING YOUR POLARIS® OFF-ROAD VEHICLE PERFORMING as well as the day you brought it home is proper maintenance. Items like belts, filters, and batteries represent only a few of these critical items engineered specifically by Polaris®.

## BATTERIES

Never leave a battery unattended during the storage season. To ensure your battery maintains its level of charge when unused for extended periods of time or during freezing weather, the battery should be connected to a BatteryMINDER®. Be sure to check for corrosion from the terminals to the ends of the cables.

## BRAKE PADS

Check your brakes if you are close to the recommended service interval, hear grinding when applying the brakes, your vehicle is taking longer to stop or if you have to apply more pressure to your pedal to engage the brakes. Check the brake discs for signs of cracks, excessive corrosion or warping.

If the brake pads are contaminated with oils or grease (petroleum products), brake pads have to be discarded and replaced.

Discs need to be cleaned with brake cleaner or alcohol based cleaner only.

## AIR FILTERS

Critical to engine performance and reliability. A clogged air filter can restrict air flow to the engine leading to reduced engine performance. Dirt and debris ingestion can damage the engine leading to reduced engine life or catastrophic failure. Polaris® recommends changing the vehicle's air filter at the specified intervals outlined in the owner's manual, which may be shorter if your vehicle is subject to severe conditions.

## DRIVE BELTS

Polaris Engineered® belts deliver unmatched performance for your off-road vehicle. Developed and tested on all our engines for all environments and conditions. Check your belt for delamination, hour glassing and glazing.

## OIL FILTERS

Change oil filters with every oil change to provide the best protection for your engine. Superior engine protection keeps your engine operating at peak performance. Be sure to follow the suggested service intervals for oil/oil filter changes.

## MAINTENANCE TIP

### BREAK-IN PERIOD

The break-in period for your new Polaris Sportsman® is the first 25 hours of operation, or the time it takes to use the first two tanks of fuel. No single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine. Perform the listed procedures carefully.

NOTICE: Excessive heat build-up during the first three hours of operation will damage close-fitted engine parts. Do not operate at full throttle or high speeds for extended periods during the first three hours of use.
