Offers fully-sealed or flipped-down venting options. Upper half detaches, leaving lower half for protection with maximum ventilation.

The three-position adjustment system easily opens, providing in-cab ventilation.

REAR PANELS

Turbulent air forms above the cargo bed and behind the cab when you add a windshield. This swirl can carry dirt, dust, leaves, and rain into the cab. Eliminate this phenomenon and **control the swirl** by installing a rear panel.

PRO ARMOR®

ADVANCED TECH

RIGID® lights are driven by Aluminum PCB Smart Boards™, 6063-T5 aircraft aluminum extruded housings and Tiger Drylac® UV protection polyester powdercoating.

EXCLUSIVE OPTICS

RIGID® invests heavily in optical science and has patented multiple optics and optics systems, maximizing light output and efficiency.

RIGID® LIMITED LIFETIME WARRANTY

If you own a RIGID® light and it breaks, we will replace or repair it for life.*

RUGGED CONSTRUCTION

Pro Armor® lights are designed to be big and beefy with an aggressive style all their own, and housed in IP67 marine-grade rated UV polyester powdercoating.

MASSIVELY BRIGHT

Pro Armor® builds bright lights designed for any riding experience. All that power is directed through heat dissipating aluminum for streamlined heat management.

PRO ARMOR®

Each wheel and tire Pro Armor® designs for off-road vehicles performs perfectly in the intended environment for its intended use. Developed, tested, and produced in partnership so you can tackle the terrain ahead with Polaris®.

TRIPLE-BELTED SIDEWALLS

- Sidewalls are the most vulnerable puncture area of any off-road tire
- Pro Armor® makes tires with extra protection exactly where it's needed most - the sidewall

8 OR 10-PLY RATED

- Pro Armor® builds the toughest tires
- Higher ply ratings mean added protection

INNOVATION

DUAL DUROMETER LUGS (Crawler XG & Attack 2.0)

- Firm durometer rubber on base of lug for stability
- Soft durometer rubber on top of lug for sticky grip

DUAL COMPOUND TREAD (Dual-Threat)

- Firm durometer rubber on center of tread for long wear life
- Soft durometer rubber on shoulders of tread for superior grip

4,828+ km RATED

Pile on the kilometers with Pro Armor® tires. Every tire is designed and constructed with longevity in mind. With ratings of 4,828 kilometers and beyond, you are assured long life and performance.

FOR THE LIFE OF YOUR RIDE ONLY THE BEST WILL DO

To create the best oil for any terrain, we invest in rigorous testing to ensure our oil delivers the consistency and performance you demand. The results are Polaris Engineered Lubricants™ that are tested and perfected to deliver excellent total engine protection for the life of your ride.

WHAT COUNTS IN OIL TESTING:

1. Does it protect the engine at high temperatures?
2. Does it keep the engine free from carbon and buildup?
3. Does the oil hold its viscosity over time?

ENGINE CHECKPOINTS

When evaluating an engine oil and its ability to protect and preserve the engine's power output and lifespan, Polaris® engineers focus on key areas within the engine, some of the most critical ones include:

RING LANDS: Poor oxidative performance can lead to carbon and varnish buildup, which results in poor ring seal and loss of power, combustion blow by and fuel dilution of the oil.

PISTON RINGS: During the combustion process, extreme pressures are placed on the top ring, forcing it outward toward the cylinder wall, sealing the combustion chamber. With so much force applied, poor oil film strength between the top ring and the cylinder wall can lead to cylinder wear and loss of power.

ROD BEARINGS: Engine bearings ride on an extremely thin hydrodynamic film of oil. Poor oil film strength or using an oil with a thinner viscosity, can lead to premature bearing wear or even engine failure. Using an oil with high film strength and a strong viscosity, like PS-4 full synthetic, will extend the service life of your engine.

CAMSHAFT: Direct Acting Overhead Camshafts are used on many Polaris® Prostar® Engines. In this application the camshaft pushes directly on the valve, creating very high contact pressures compared to other camshaft configurations. These forces are so great that inferior oil can break down and be forced out of the contact area leading to increased wear. PS-4 full synthetic additives are specifically designed to provide wear protection against this.

SPECIFIC NEEDS, SPECIFIC OILS

Polaris® invests millions in engine development, and part of that investment is making sure its lubricants—critical to engine performance—are the right formula for your specific engine. The amount of testing data and engineering resources used in developing Polaris® lubricants would overwhelm an aftermarket company. Therefore, the aftermarket must produce an oil to an industry-wide standard that must account for a variety of operating parameters.

PS-4 is designed specifically for Polaris® 4-cycle engines and has high film strength and wear protection under extreme loads and temperatures. Exclusive anti-wear additives protect engine parts with extra rust and corrosion protection.

PS-4 FULL-SYNTHETIC OIL

PS-4 is optimal for ambient operating temperatures of -40° C to 38° C

OUR FORMULATION

- Full-synthetic formula with wide, 5W-50 viscosity range
- Extreme cold weather flow and startup protection
- Maximum rust and corrosion protection
- Proprietary anti-wear additive system

YOUR ADVANTAGE

- All-weather engine protection
- Easy starting in all conditions
- Internal engine protection from extreme temperature fluctuations and periods of non-use or storage
- Reduced friction, protects cams, pistons, bearing and valvetrain components from wear

PS-4 EXTREME-DUTY FULL-SYNTHETIC OIL

PS-4 Extreme Duty is optimal for ambient operating temperatures of -18° C to 54° C

OUR FORMULATION

- Extreme high-temperature engine protection
- Full-synthetic formula with strong, 10W-50 Viscosity Range
- Protects against rust and corrosion of internal engine parts during periods of non-use or storage

YOUR ADVANTAGE

- High-strength film protection withstands extreme heat, stress and sustained high RPM conditions
- Extremely shear stable, maintains viscosity under heat and stress
- Protects engine from moisture that can build up inside the engine as a result of extreme temperature fluctuations

TIRE SEALANT

HOW IT WORKS

Tire sealant remains liquefied inside your tire until a leak develops in the tire or wheel.

Once a leak occurs, the tire sealant rushes out of the tire and quickly creates a permanent solid plug.

The plug maintains the pressure of the tire so you can continue your ride.

PREMIUM TIRE SEALANT

- Instantly seals and repairs rim, bead leaks, and punctures up to 0.64 cm on standard tires, and 1.9 cm on heavy ply tires
- Helps maintain air pressure for the life of the tire
- Helps seal the tire bead against the wheel
- 100% water soluble for easy cleanup
- Will not rust, corrode, or pit wheels
- Creates permanent repair
- Remains fluid and effective in temperatures down to -43° C
- Easily installed through existing tire valve stem with valve core removed

FOR THE LIFE OF YOUR RIDE

POLARIS® ENGINEERS PARTS THAT PUSH THE LIMITS WITHOUT SACRIFICING STRENGTH AND DURABILITY.

We build our products so anyone with the right tools can maintain their vehicle from their own garage - and get them back on the trails where they belong.

MAINTENANCE TIP

BREAK-IN PERIOD

The break-in period for your new GENERAL® is the first 25 hours of operation, or the time it takes to use the first two tanks of fuel. No single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine. Perform the listed procedures carefully.

NOTICE: Excessive heat build-up during the first three hours of operation will damage close-fitted engine parts. Do not operate at full throttle or high speeds for extended periods during the first three hours of use.

SEE OUR LATEST MAINTENANCE TIPS AT POLARIS.COM/MAINTENANCE-VIDEOS

AIR FILTERS

Critical to engine performance and reliability. A clogged air filter can restrict air flow to the engine leading to reduced engine performance. Dirt and debris ingestion can damage the engine leading to reduced engine life or catastrophic failure. Polaris® recommends changing the vehicle's air filter at the specified intervals outlined in the owner's manual, which may be shorter if your vehicle is subject to severe conditions.

BRAKE PADS

Check your brakes if you are close to the recommended service interval, hear grinding when applying the brakes, your vehicle is taking longer to stop or if you have to apply more pressure to your pedal to engage the brakes. Check the brake discs for signs of cracks, excessive corrosion or warping.

If the brake pads are contaminated with oils or grease (petroleum products), brake pads have to be discarded and replaced.

Discs need to be cleaned with brake cleaner or alcohol based cleaner only.

HALF SHAFT

Extreme elements can contribute to axle failure when grease escapes the joint. This usually occurs if the CV boot becomes compromised. Full replacement or part specific available.

DRIVE BELTS

Polaris Engineered® belts deliver unmatched performance for your off-road vehicle. Developed and tested on all our engines for all environments and conditions. Check your belt for delamination, hour glassing and glazing.

BREAK-IN PERIOD

- Use lower gear (if available) while varying speeds and avoiding wide open throttle for 8-16 km
- If no low gear is available, vary at moderate speeds while avoiding wide open throttle for 80 km

OUR INVESTMENT

- 32,187 km of field testing
- Thousands of dyno hours
- 18+ months of development (3,000+ design hours) per belt
- 1200+ vehicle validation hours
- Collaboration with powertrain & clutch engineers

YOUR ADVANTAGE

- No clutch recalibration
- Less wear & tear due to heat
- Ensure maximum vehicle performance
- More time riding, less time wrenching
- Produced in collaboration with powertrain and clutch engineers to ensure a perfect fit, maximum performance and ultimate durability

BATTERIES

Never leave a battery unattended during the storage season. To ensure your battery maintains its level of charge when unused for extended periods of time or during freezing weather, the battery should be connected to a BatteryMINDER®, P. 42. Be sure to check for corrosion from the terminals to the ends of the cables.

OIL FILTERS

Change oil filters with every oil change to provide the best protection for your engine. Superior engine protection keeps your engine operating at peak performance. Be sure to follow the suggested service intervals for oil/oil filter changes.

HD HEAVY DUTY PARTS

All Polaris® parts are developed and tested to help you get the most out of your ride. Now, we're taking the passion of our riders, workers, and outdoor enthusiasts to the next level with HD Parts. These heavy-duty parts are engineered for riders who want greater durability and enhanced performance. HD Parts are designed and tested to handle greater wear and tear under all weather conditions. This means longer ride times with less service interruptions and related costs.

BATTERY MAINTENANCE TIPS

Extend your battery life with a BatteryMINDer® and these tips.

1. Store batteries in a cool, dry location.
2. Check that the battery connections are tight. Cables should not be able to be rotated or shifted by hand.
3. If your battery has a drain tube, make sure it is free of clogs.
4. Clean your battery - use a soft brush to scrub the top of the battery. Use baking soda to remove grease.
5. Connect a BatteryMINDer® after using your vehicle even if the vehicle is in regular use.
