ALL-TERRAIN TRACTION

It's tough to make SPORTSMAN even more versatile than it already is. But with a set of Prospector Pro® Tracks, you'll do just that. Tread through deep snow without concern.

Polaris-specific gearing provides 1:1 ratio to:

- Minimize track slip, providing better climbing ability and improved traction in deep snow
- Improve top speed over prior models by approximately 5%
- Reduce operating RPM for a quieter ride
- Improve driveline durability, which allows vehicle to run at a lower RPM, decreasing engine wear

Polaris exclusive optimized hub geometry that minimizes feedback and eases steering effort

Lightweight design provides for better flotation, eases steering effort, and provides better vehicle control

Flexible lug design provides the highest level of deep snow performance by lifting up in deep snow as opposed to digging down

New front dual stabilizer for improved stability

MAINTENANCE TIP

BREAK-IN PERIOD

The break-in period for your new SPORTSMAN is the first 25 hours of operation, or the time it takes to use the first two tanks of fuel. No single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine.

NOTICE: Excessive heat build-up during the first three hours of operation will damage close-fitted engine parts. Do not operate at full throttle or high speeds for extended periods during the first three hours of use.

SEE OUR LATEST MAINTENANCE TIPS AT ATV.POLARIS.COM/EN-US/SELF-HELP

BATTERY

To ensure a battery maintains its level of charge when unused for extended periods of time or during freezing weather, the battery should be connected to a BatteryMINDER® (see P. 60). Be sure to check for corrosion from the terminals to the ends of the cables.

BRAKE PADS

Maintaining and/or replacing brakes are critical to the safety and functionality of a vehicle. Brake pads should be checked for wear and oil or grease (petroleum products) contamination and brake discs should be checked for cracks, excessive corrosion or warping.

HALF SHAFT

Check for tears and punctures in the boot, which can lead to CV joint wear that can contribute to axle failure.

AIR FILTER

A clogged air filter can restrict air flow to the engine leading to reduced engine performance, engine life or catastrophic failure.

DRIVE BELT

Polaris Engineered belts deliver unmatched performance for your off-road vehicle. Developed and tested on all our engines for all environments and conditions. Check your belt for delamination, hour glassing and glazing.

BREAK-IN PERIOD

- Use lower gear (if available) while varying speeds and avoid wide open throttle for 5-10 miles
- If no low gear is available, vary at moderate speeds while avoiding wide open throttle for 50 miles

OUR INVESTMENT

- 40,000+ miles of field testing
- Thousands of dyno hours
- 18+ months of development (13,000+ design hours) per belt
- 1,500+ vehicle validation hours
- Collaboration with powertrain and clutch engineers

YOUR ADVANTAGE

- No clutch recalibration
- Less wear and tear due to heat
- Ensure maximum vehicle performance
- More time riding, less time wrenching
- Produced in collaboration with powertrain and clutch engineers to ensure a perfect fit, maximum performance and ultimate durability

OIL FILTER

Change oil filters with every oil change to provide the best engine protection and keep the engine operating at peak performance.

BATTERY MAINTENANCE TIPS

Extend your battery life with a BatteryMINDER® and these tips:

1. Store batteries in a cool, dry location.
2. Check that the battery connections are tight. Cables should not be able to be rotated or shifted by hand.
3. If your battery has a drain tube, make sure it is free of clogs.
4. Clean your battery - use a soft brush to scrub the top of the battery. Use baking soda to remove grease.
5. Connect a BatteryMINDER® after using your vehicle even if the vehicle is in regular use.

TIRE SEALANT

HOW IT WORKS

Tire sealant remains liquefied inside the tire until a leak develops in the tire or wheel.

Once a leak occurs, the tire sealant rushes out of the tire and quickly creates a permanent solid plug.

The plug maintains the pressure of the tire so you can continue your ride.

- PREMIUM TIRE SEALANT**
- Instantly seals and repairs rim, bead leaks and punctures up to .25" on standard tires and .75" on heavy ply tires
 - Helps maintain air pressure for the life of the tire
 - Helps seal the tire bead against the wheel
 - 100% water soluble for easy cleanup
 - Will not rust, corrode or pit wheels
 - Creates permanent repair
 - Remains fluid and effective in temperatures down to -45° F
 - Easily installed through existing tire valve stem with valve core removed
