Items marked (*): Included in Hardware Kit PN 2207258.

**TOOLS REQUIRED**

- Safety Glasses
- Drill
- Drill Bit: 1/8th inch (3 mm)
- Pliers, Push Pin Rivet
- Screwdriver Set, Torx®
- Socket Set, Hex Bit, Metric
- Socket Set, Metric
- Torque Wrench
- Wrench Set, Metric

**IMPORTANT**

Your Winch Kit is exclusively designed for your vehicle. Please read the installation instructions thoroughly before beginning. Installation is easier if the vehicle is clean and free of debris. For your safety, and to ensure a satisfactory installation, perform all installation steps correctly in the sequence shown.
## HARNESS DETAIL
### WINCH HARNESS ①:

<table>
<thead>
<tr>

* Or compatible kit.
INSTALLATION INSTRUCTIONS

IMPORTANT

Carefully read **GEAR SELECTION** section at end of manual to familiarize yourself with proper operation of Rapid Rope Recovery function.

1. Shift vehicle transmission into “PARK”. Turn ignition key to “OFF” position and remove from ignition switch.

2. Flip up passenger seat bottom, remove driver’s seat and underseat storage compartment, then disconnect black negative (-) cable from battery.

3. Gain access.
   a. Remove hood.
   b. Remove lower grille by carefully depressing two tabs A at top of grille, tip grille outward, then lift grille out of two lower side tabs B in upper fascia.

   **NOTE**

   Bumper hidden for clarity.

   **CAUTION**

   Bumper weighs approximately 38 lbs. (17 kg). Provide adequate support for bumper before removing final screws. Failure to comply may result in personal injury or damage to bumper.

   b. While supporting bumper, remove nut F and screw G. Repeat for opposite side, then remove bumper and set aside. Retain hardware.

   **NOTE**

   Screws G pass through bumper support brackets H. These brackets will be referenced in Step 5a.

4. Remove and prepare front bumper.
   a. Remove nut D and screw E from bottom of bumper. Repeat for opposite side. Retain hardware.

   c. Remove upper dash cupholder by removing two push pin rivets C, then sliding cupholder rearward. Retain rivets.
c. Install autostop fairlead ③ and fairlead backer plate ② to bumper using two screws ④. Tighten screws. Set bumper aside.

**IMPORTANT**

Ensure fairlead is oriented so electrical harness exits on RH side of bumper as shown.

**TORQUE**

| 40 ft. lbs. (54 Nm) ± 10% |

5. Install winch assembly.

a. Hang rear hooks of winch assembly ① on vehicle front support structure, centered between two bumper support brackets ⑧ as noted in previous Step 4b.

b. At UPPER fastener holes loosely install two screws ⑨ REARWARD through winch into vehicle front support structure.

c. At LOWER fastener holes install two screws ⑩ FORWARD through vehicle front support structure and winch, then secure each screw with nut ⑩.

d. Torque screws ⑨ and nuts ⑩ to specification.

**TORQUE**

| 40 ft. lbs. (54 Nm) ± 10% |
6. Route cables and make connections at terminal block.
   a. Route terminal block cables 1 upward from winch 1, then through cut-out in under-hood liner 8. Secure cables to vehicle using edge clip 1D and lower routing clip 1J.
   
   **NOTE**
   See previous section, Harness Detail, for connector identification.
   View looking inboard from right front wheel well. Wheel hidden for clarity.
   
   b. Secure terminal block cables 1 to under-hood liner using upper routing clip 1J.
   
   c. Join RED 45 degree ring terminal 1A to terminal block battery positive (+). Torque nut to specification, then install boot.
   
   **Torque**
   30 in. lbs. (3.4 Nm) ± 10%
   
   **NOTE**
   If two cable boots exist for same terminal, then slide inner boot (closest to terminal block) down cable. Unused boot can remain on cable. Red boot not shown for clarity.
   
   d. Join BLACK straight ring terminal 1B to chassis ground / battery negative (−). Torque nut to specification.
   
   **Torque**
   8 ft. lbs. (11 Nm) ± 10%
   
7. Locate UNUSED 4-pin main vehicle harness breakout connector 1 (near head of lower left winch attach screw 9). Remove cap from connector, then join to mating winch connector 1C.
   
   **NOTE**
   View looking inboard from right front wheel well. Some vehicle components hidden for clarity.
   
8. Install remote and associated components.
   a. Install wireless receiver.
      i. Install wireless receiver 14 to RH side of under-hood liner using four screws 10. Do not over-tighten screws.
      ii. Route wireless receiver connectors 14B and 14C rearward through firewall grommet into upper dash compartment.
iii. Locate UNUSED 4-pin main vehicle harness breakout connector M in cavity where cupholder was removed in Step 3c. Remove cap from connector, then join to mating wireless receiver connector 14B.

**NOTE**

Wireless receiver connector 14C provided for optional WIRED remote connection. See previous section, HARNESS DETAIL, for more information.

b. OPTIONAL: Install wireless remote.

**NOTE**

Wireless remote can be stowed in any suitable location. Holder B is not required.

i. Remove wireless remote D from holder B. Determine suitable mounting location for holder with special attention to the following:

- Driver operation of vehicle (including travel of controls, such as shift lever)
- Driver visibility
- Adequate clearance between holder mounting fasteners and other vehicle components on underside of mounting surface

ii. Using holder B as template, mark and drill two 1/8 inch (3 mm) holes into mounting surface.

**IMPORTANT**

Control drill depth to prevent damage to underlying structure or components.

iii. Install holder B using two screws I. Do not over-tighten screws.

iv. Reinstall wireless remote into holder.

9. Reinstall bumper.

a. Unwind BY HAND several turns of rope from winch spool. While lifting bumper into position thread loop at end of rope through bumper and fairlead 1.

b. Loosely install middle of bumper to vehicle frame using two each retained screws G and nuts F. See Step 4b.

c. Install bottom of bumper to vehicle frame using two each retained screws E and nuts D. See Step 4a.

d. Torque fasteners to specification.

**TORQUE**

40 ft. lbs. (54 Nm) ± 10%

10. Reinstall lower grille. See Step 3B.
11. Connect autostop fairlead ③.

**NOTE**

View looking up and forward from front right wheel. Installation of RIDE COMMAND® Kit (PN 2882872, 2884564, or equivalent) may affect some of the following connections. See instructions included with RIDE COMMAND® Kit for details.

a. Your vehicle will have one of two chassis harness configurations at front of vehicle. Harness configuration will affect installation of autostop fairlead connector.

Determine harness configuration as follows:

**FACTORY CHOICE** harness has the following breakouts:
• Two regulators N
• 4–pin female connector ① (previously joined to connector 1C in Step 7)
• 2–pin male connector ②
• 2–pin female connector ⑧

**NON-FACTORY CHOICE** harness has the following breakouts:
• One regulator ⑧
• 4–pin female connector ① (previously joined to connector 1C in Step 7)

b. Make electrical connections.

**NOTE**

See previous section, HARNESS DETAIL, for connector identification.

**FACTORY CHOICE**

i. Join connector 1F on winch ① to main chassis harness connector ②.

ii. Join main chassis harness connector ⑧ to connector 3A on autostop fairlead ③.

iii. Ensure routing prevents harness contact with hot components, sharp edges, or moving parts.

**NON-FACTORY CHOICE**

Join connector 1F on winch ① to connector 3A on autostop fairlead ③. Ensure routing prevents harness contact with hot components, sharp edges, or moving parts.

12. Install remaining winch components.

a. Thread loop at end of rope through magnetic stop ⑤. Ensure stop is oriented with WIDE end (with magnet) towards winch, and BEVELED end (with “POLARIS”) towards hook.

**TIP**

Loop a cable tie to end of rope, but do not tighten. Thread looped cable tie through magnetic stop, then pull cable tie and rope through magnetic stop.

b. Install hook ⑥ to loop at end of rope. Ensure cotter pin is secured.

13. Secure all harnesses using cable ties ⑨ as required to prevent contact with hot components, sharp edges, or moving parts.

15. Reconnect black negative (-) cable to battery, then reinstall under-seat storage compartment and driver’s seat.
OPERATION

OPERATIONAL CHECK

Wireless remote allows winch operation from outside the vehicle. If winch does not operate as described, refer to the TROUBLESHOOTING section.

IMPORTANT

The Autostop system is intended to prevent winch damage caused by over-tightening the rope, but cannot prevent all possible winch damage. The winch system is very powerful and care should be exercised whenever it is in operation.

The winch operator is always responsible for using the winch properly, as described in the accompanying "Winch User Guide". The Autostop system should only be used as a secondary preventive measure to help prevent damage to the winch from over-tightening the rope.

1. To turn wireless remote “ON”, depress and hold power button for three seconds or until LED light illuminates.

2. To extend rope, depress and hold the “OUT” button. To recover rope, depress and hold the “IN” button.

IMPORTANT

During rope retraction the winch should automatically stop when the magnetic stop ③ comes close to or contacts the autostop fairlead ③ (within approximately 1 inch (25 mm)). Magnets in the stop trigger sensors in the fairlead, stopping the winch.

3. The wireless remote will automatically turn “OFF” after 30 seconds of inactivity. To manually turn off, depress and hold power button for three seconds or until LED light extinguishes.

GEAR SELECTION

WARNING

Do NOT attempt to change gear setting while rope is under tension. Failure to relieve rope tension prior to changing gears may result in winch failure, resulting in serious personal injury or death.

NOTE

See Kit Contents for replacement knob PN.

Your winch is equipped with three different gear settings: “N” (NEUTRAL), “L” (LOW), and “H” (HIGH).

1. NEUTRAL: Used to rapidly extend the rope.

When in neutral “N” will be visible in the cutout window on the shift knob (LH side of winch).

2. LOW: Used to recover the LOADED rope.

Relieve all tension from the rope, then rotate gear select knob counter-clockwise until “L” is visible in the shift knob cutout window.
3. **HIGH**: Used to rapidly recover the **UNLOADED** rope.

   Relieve all tension from the rope, then rotate gear select knob clockwise until “H” is visible in the shift knob cutout window.

   If difficulty is encountered while shifting into HIGH, pull the winch rope slightly by hand to help align the gears.

---

**IMPORTANT**

High gear is ONLY used for rapid recovery of the **UNLOADED** winch rope. It is NOT intended for rope retraction while under load. Using high gear while under load will result in reduced winch life.

**NOTE**

The recovery speed in **HIGH** gear is approximately 5X the recovery speed in **LOW** gear. As a result, using this feature will significantly reduce the time needed to recover the rope after use.  
**Polaris recommends always returning gear selector to LOW after rapid recovery to prevent inadvertent future operation in **HIGH** gear.**
<table>

<tr>
<td></td>
<td>Winch not in proper gear</td>
<td>Rotate gear knob fully into L or H, then recheck.</td>
</tr>
<tr>
<td></td>
<td>Winch not in proper gear</td>
<td>Rotate gear knob fully into L or H, then recheck.</td>
</tr>
<tr>
<td>Winch will not change gears</td>
<td>Rope is under load</td>
<td>Changing gears while under load is intentionally difficult to prevent accidental operation, which could lead to personal injury or winch failure. Ensure rope is under no tension, and rope is not binding on spool or fairlead. Briefly operate winch, then attempt to shift again.</td>
</tr>
</tbody>
</table>

**IMPORTANT**

High gear is ONLY used for rapid recovery of the UNLOADED winch rope. It is NOT intended for rope retraction while under load. Using high gear while under load will result in reduced winch life.

**NOTE**

Winch is designed to operate slowly in low gear.
FEEDBACK FORM

A feedback form has been created for the installer to provide any comments, questions or concerns about the installation instructions. The form is viewable on mobile devices by scanning the QR code or by clicking HERE if viewing on a PC.
