When you choose Polaris, you become part of a proud community that lives for more miles, more connection, and more escape. Together, we're connected by a Polaris legacy built on moments and memories forged one ride at a time. Together, we are **BORN FOR MORE.**

## BUILT BY RIDERS, FOR RIDERS.

### 509 FOR POLARIS

#### REMAIN GUARDED

A trusted name in helmet and goggle manufacturing, 509® helmets utilize advanced materials like carbon fiber for lightweight protection.

#### DWR RESIST MOISTURE

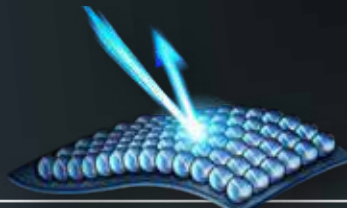

All outerwear garments are treated with superior Durable Water Repellency (DWR) to prevent any precipitation from saturating the outer fabric. The DWR causes the water to bead up and run off helping to keep you dry. Tested up to 50 washes.

### 3M Thinsulate INSULATION

#### BE WARMER

3M® Thinsulate® Insulation is the gold standard in high-tech microfiber warmth, working to deflect and diffuse cold air before it reaches your body.

### 3M Scotchlite™ Reflective Material

#### RIDE SAFER

Proven in every weather condition, patented 3M® Scotchlite™ Reflective Material radiantly bounces light back at its source so you'll always be seen.

#### GORE-TEX STAY DRIER

Trusted around the globe by millions, Gore-Tex® fabric is guaranteed to keep you dry\* by deflecting moisture and wind without compromising breathability.

#### YKK ZIPPERS LAST LONGER

The most trusted name in the industry. Quality construction that doesn't fail.

## LAYERING 101

Make sure the ride remains an enjoyable experience by staying warm and dry out in the elements. Polaris® brand outerwear is part of a smart solution that integrates multiple layers for ultimate performance. Create your own environment by mixing outer layers, insulating mid-layers, and base layers. Finding the right combination for you is essential to being comfortable, allowing for adjustment as the weather conditions change.

BASE

Helps regulate your overall temperature by wicking away moisture.

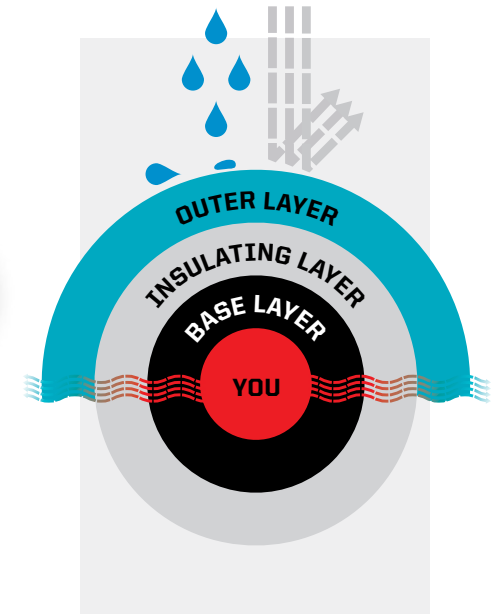

INSULATING

Works to pull moisture away while keeping body heat near the skin.

OUTER

Regulates your body temp by venting moisture and blocking out wind, snow, and water.

# OPTIMIZING TRACTION AND CONTROL

	SKIS	CARBIDES	TRACK/STUDS
<b>MOUNTAIN</b>	Add Gripper Skis for a deeper keel, greater flotation, and positive steering in deep, loose snow.	For added trail capability, use 4" carbides.	Run a deeper lug and more aggressive track pattern to accommodate softer, deeper snow.
<b>CROSSOVER</b>	Choose PRO-Steer Skis if you prefer more trail riding or Gripper Skis if you use trails to get to your next jump-off point.	For improved cornering without compromising deep-snow performance, use 6" carbides.	Choose a track with a lug depth between 1.35" and 1.75". If you ride off-trail more, choose the lug depth that works for the depth of snow.
<b>TRAIL</b>	For true trail performance, add the Polaris Engineered™ PRO-Steer Ski—specially designed with a low-profile keel.	Dual-runner carbides like the Dooly or Slim Jim reduce darting while increasing corner performance and stability in and out of the apex.	Choose a track based on your sled's rail length and add the number of studs based on your sled model and whether you're a trail, performance, or intermediate rider.

## CARBIDE WEAR STRIPS

Carbides need to be replaced periodically due to normal wear and use. Rocks, cement, pavement, and road crossings all contribute to carbide wear.

## CHOOSE YOUR LENGTH

### 3" - 4" CARBIDE

- Perfect for sleds with a 121" track with 96 studs or less or sleds with 1" lugs taking corners at moderate speeds.

### 6" CARBIDE

- Ideal for sleds in the 136" track range with up to 1 1/4" lugs or shorter track sleds with more than 96 studs.

### 8" CARBIDE

- Best for ultimate performance sleds with a 144" track or longer with paddles and/or the maximum amount of studs.

# STUDS

RIP WITH AN **IRON GRIP**: Track studs allow you to dominate terrain as far and as fast as you can see. The right stud improves acceleration, braking, steering, and control, especially on hard-packed snow and ice. The more aggressive your riding style, the more traction your sled needs to perform at its best.

### CHOOSING THE RIGHT STUD

1. Determine your riding style and terrain.
2. Find sled model info and number of studs required.
3. Determine length of turning carbides to balance traction and steering.
4. Make sure the studs won't interfere with your tunnel or cooling system.

\*Belt dimensions are given in nominal dimensions. There is a +/- variance for all critical dimensions. Clutch setup must be inspected when a new belt is installed and should be adjusted if necessary. The drive belt is an important component in the CVT system. In order to achieve maximum efficiency from the converter, drive belt deflection (tension), clutch offset, and alignment must be adjusted properly. See your Service Manual for further details on drive belt measurement inspection.
