## TECHNOLOGY TO CONQUER THE RIDE.

ELEVATE YOUR RIDE WITH EXCLUSIVE **TECH54** RIDING GEAR DESIGNED TO KEEP YOU WARM AND DRY.

To us, winter is more than just another season. It's when the landscape is frozen by an icy grip and snow transforms terrain into an endless playground. Like you, we savor every minute, which is why our Apparel Center of Excellence developed TECH54—a waterproof, breathable membrane featured in every Polaris jacket, bib and monosuit. This exclusive technology allows perspiration to escape and keeps water out, so no matter how you ride, or where you ride, you stay dry, warm and comfortable.

- Heat and sweat escape
- Water stays out
- Tailored for how you ride
- Stay dry, warm and comfortable

- Choose your TECH54 rating based on the weather conditions and your level of exertion
- Choose **5K/5K** for colder & drier conditions and moderate activity
- Choose **10K/10K** for extremely wet riding conditions and high-activity riding

TECH54 is featured in all Polaris jackets, bibs and monosuits including men's, women's and youth. Look for the TECH54 logo when shopping at your local dealer or online.

DIVE DEEPER INTO TECH54 AT [POLARIS.COM/TECH54](https://www.polaris.com/tech54)

Any weather, any terrain, any adventure—TECH54 will never let you down.

### CARBIDE WEAR STRIPS

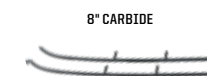

Carbides need to be sharpened or replaced periodically due to normal wear and use. Rocks, cement, pavement and road crossings all contribute to carbide wear.

Perfect for sleds with a 121" track with 96 studs or less or sleds with 1" lugs taking corners at moderate speeds

Ideal for sleds in the 136" track range with up to 1 1/4" lugs or shorter track sleds with more than 96 studs

Best for ultimate-performance sleds with a 144" track or longer with paddles and/or the maximum amount of studs

# FOUR KEYS TO TRACK SELECTION

## LENGTH

The inside circumference of the track is calculated as the drive pitch multiplied by the number of track segments. It must be correct to the nearest inch for proper fit without additional modifications to the skid frame.

## DRIVE PITCH

The drive cog center distance around the circumference of the cogs on the drive axle. It must match the existing track or the drive cogs must be changed.

- 2.52" drive pitch primarily machines manufactured before 2007
- 2.86" drive pitch especially on recent models manufactured after 2007
- 3" and new 3.5" drive pitch for lowest weight on select mountain sleds

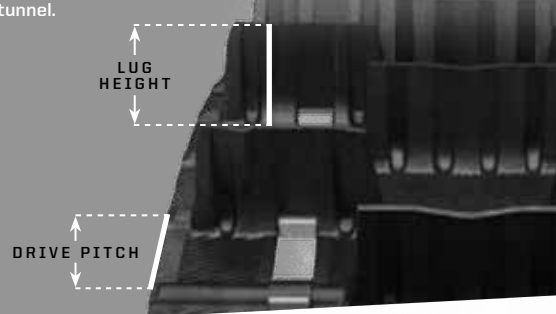

## WIDTH

The measurement across the track governed by the width of the tunnel.

## LUG HEIGHT

The distance lugs extend above the track surface.

- Trail: 1" - <1.5"
- On/Off Trail: 1.5" - <2"
- Deep Snow: 2" and greater

Every Polaris snowmobile has been engineered and manufactured to deliver performance. Keep it that way by using the same lubricants, cleaners and service parts our factory-trained technicians use.

### DRIVE BELTS

Only genuine Polaris Engineered Drive Belts provide a fit and optimum compound for maximum performance and reliability.

#### BREAK-IN PERIOD

The break-in period for a new belt is 80.5 kilometers. During this time, vary at moderate speeds while avoiding wide-open throttle.

### SPARK PLUGS

New spark plugs engineered specifically for your Polaris snowmobile ensure quick starts, fuel efficiency and peak performance.

### BATTERIES

Cold weather, harsh conditions and time can degrade a battery. A genuine Polaris replacement ensures an exacting fit and starting performance.

### CARBIDES

Replace worn carbides or enhance your sled's handling with engineered exact fit wear bars with your choice of high-wear carbide length.

### TRACKS

**FOR THE LIFE OF YOUR RIDE, ONLY THE BEST WILL DO.**

In the continued pursuit of creating the best oil on snow, we invest in rigorous testing to ensure our oil delivers unrivaled consistency and performance. The result is Polaris Engineered Lubricants that are tested and perfected to deliver excellent total engine protection for the life of your ride.

**WHAT COUNTS IN OIL TESTING:**

1. Does it protect the engine at low temperatures?
2. Does it protect the engine from high heat wear?
3. Does it keep the engine clean?

**PISTON CHECKPOINTS**

**PISTON DOME:** Is it clean? Clean burning oil and our proprietary detergency system prevent carbon buildup and hot spots, which extend piston life and maintain optimal run quality.

**PISTON RINGS AND RING LANDS:** Are they free of carbon deposits and soot? This is important to preserve ring seal and maximum power output.

**PISTON PINS AND NEEDLE BEARINGS:** Proper viscosity and lubricity, film strength and our proprietary additives provide exceptional protection and heat control, maintaining proper pin and bearing tolerances and performance.

**PISTON SKIRT:** Is the GRAFAL® coating scratched or visibly damaged? Harsh contact between the cylinder and piston due to insufficient lubrication would eventually result in engine failure.

**POLARIS BLUE**

Synthetic-blend 2-cycle engine oil formulated for excellent protection and performance in all non-exhaust valve (non-VES) 2-cycle applications including oil-injected and premix.

**OUR FORMULATION**

- Semi-synthetic formula
- High lubricity
- Proprietary corrosion additive package

**YOUR ADVANTAGE**

- Prevents rust and corrosion, ring sticking and plug fouling
- Lower total cost of ownership including extending the life of the engine

**VES**

Low-odor, low-smoke oil formulation designed to improve exhaust valve performance. VES offers maximum engine protection.

**OUR FORMULATION**

- Full synthetic formula
- Proprietary anti-wear, corrosion and detergency-additive package
- Retains film on critical engine parts after hot shutdown

**YOUR ADVANTAGE**

- Engineering-approved for use across all snow engine platforms
- Cleaner burning resulting in extended life of cylinders, pistons, rings and bearings
- Protects engine during periods of non-use or storage
- Reduces pull effort by leaving components lubricated

**VES EXTREME**

Engineered, formulated and tested to easily handle the high demands of today's high-performance Polaris snowmobile engines.

**OUR FORMULATION**

- Full synthetic, 100% PAD and Ester formula
- Highest engine film strength and lubricity protection

\*Belt dimensions are given in nominal dimensions. There is a +/- variance for all critical dimensions. Clutch setup must be inspected when a new belt is installed and should be adjusted if necessary. The drive belt is an important component in the CVT system. In order to achieve maximum efficiency from the converter, drive-belt deflection (tension), clutch offset and alignment must be adjusted properly. See your Service Manual for further details on drive-belt measurement inspection.
