TECH54

TECHNOLOGY TO CONQUER THE RIDE.

ELEVATE YOUR RIDE WITH EXCLUSIVE **TECH54** RIDING GEAR DESIGNED TO KEEP YOU WARM AND DRY.

To us, winter is more than just another season. It's when the landscape is frozen by an icy grip and snow transforms terrain into an endless playground. Like you, we savor every minute, which is why our Apparel Center of Excellence developed TECH54—a waterproof, breathable membrane featured in every Polaris jacket, bib and monosuit. This exclusive technology allows perspiration to escape and keeps water out, so no matter how you ride, or where you ride, you stay dry, warm and comfortable.

- Heat and sweat escape
- Water stays out
- Tailored for how you ride
- Stay dry, warm and comfortable

- Choose your TECH54 rating based on the weather conditions and your level of exertion
- Choose **5K/5K** for colder & drier conditions and moderate activity
- Choose **10K/10K** for extremely wet riding conditions and high-activity riding

TECH54 is featured in all Polaris jackets, bibs and monosuits including men's, women's and youth. Look for the TECH54 logo when shopping at your local dealer or online.

DIVE DEEPER INTO TECH54 AT [POLARIS.COM/TECH54](https://www.polaris.com/tech54)

Any weather, any terrain, any adventure—TECH54 will never let you down.

FOR THE LIFE OF YOUR RIDE, ONLY THE BEST WILL DO.

In the continued pursuit of creating the best oil on snow, we invest in rigorous testing to ensure our oil delivers unrivaled consistency and performance. The result is Polaris Engineered Lubricants that are tested and perfected to deliver excellent total engine protection for the life of your ride.

WHAT COUNTS IN OIL TESTING:

1. Does it protect the engine at low temperatures?
2. Does it protect the engine from high heat wear?
3. Does it keep the engine clean?

PISTON CHECKPOINTS

PISTON DOME: Is it clean? Clean burning oil and our proprietary detergency system prevent carbon buildup and hot spots, which extend piston life and maintain optimal run quality.

PISTON RINGS AND RING LANDS: Are they free of carbon deposits and soot? This is important to preserve ring seal and maximum power output.

PISTON PINS AND NEEDLE BEARINGS: Proper viscosity and lubricity, film strength and our proprietary additives provide exceptional protection and heat control, maintaining proper pin and bearing tolerances and performance.

PISTON SKIRT: Is the GRAFAL® coating scratched or visibly damaged? Harsh contact between the cylinder and piston due to insufficient lubrication would eventually result in engine failure.

POLARIS BLUE

*Belt dimensions are given in nominal dimensions. There is a +/- variance for all critical dimensions. Clutch setup must be inspected when a new belt is installed and should be adjusted if necessary. The drive belt is an important component in the CVT system. In order to achieve maximum efficiency from the converter, drive-belt deflection (tension), clutch offset and alignment must be adjusted properly. See your Service Manual for further details on drive-belt measurement inspection.
