

POLARIS RACING

New Spring Design

November 18, 2019

NEW PRODUCT ANNOUNCEMENT

Hyperco is pleased to announce the release of our latest spring design built in collaboration with Polaris Racing for the 2019/2020 Snocross racing season. The need for an affordable yet durable spring option to endure the rigors of tight turns, banked corners, steep jumps and obstacles in sub-freezing environments was brought to our attention so went to work. The creation was a 10" length x 2.25" ID x 250#/in rate design is capable of handling more than 1,600lbs of load and 6.5"+ of total travel and weighing a mere 2.9lbs.

Built with our OBD (Optimum Body Diameter) formula, these springs are specifically designed to decrease the side loading and stiction forces within the damper which aids in high speed and low speed dampening responsiveness. Hyperco springs also reduce seal and shaft wear while allowing for more total deflection and usable performance.

These new springs will be in stock soon and available through RE Suspension for \$125 each. Call soon to get yours on order in time for the new season!
